

TUDOR

TUDOR

E-COM PROGRAM

Kick-off Presentation

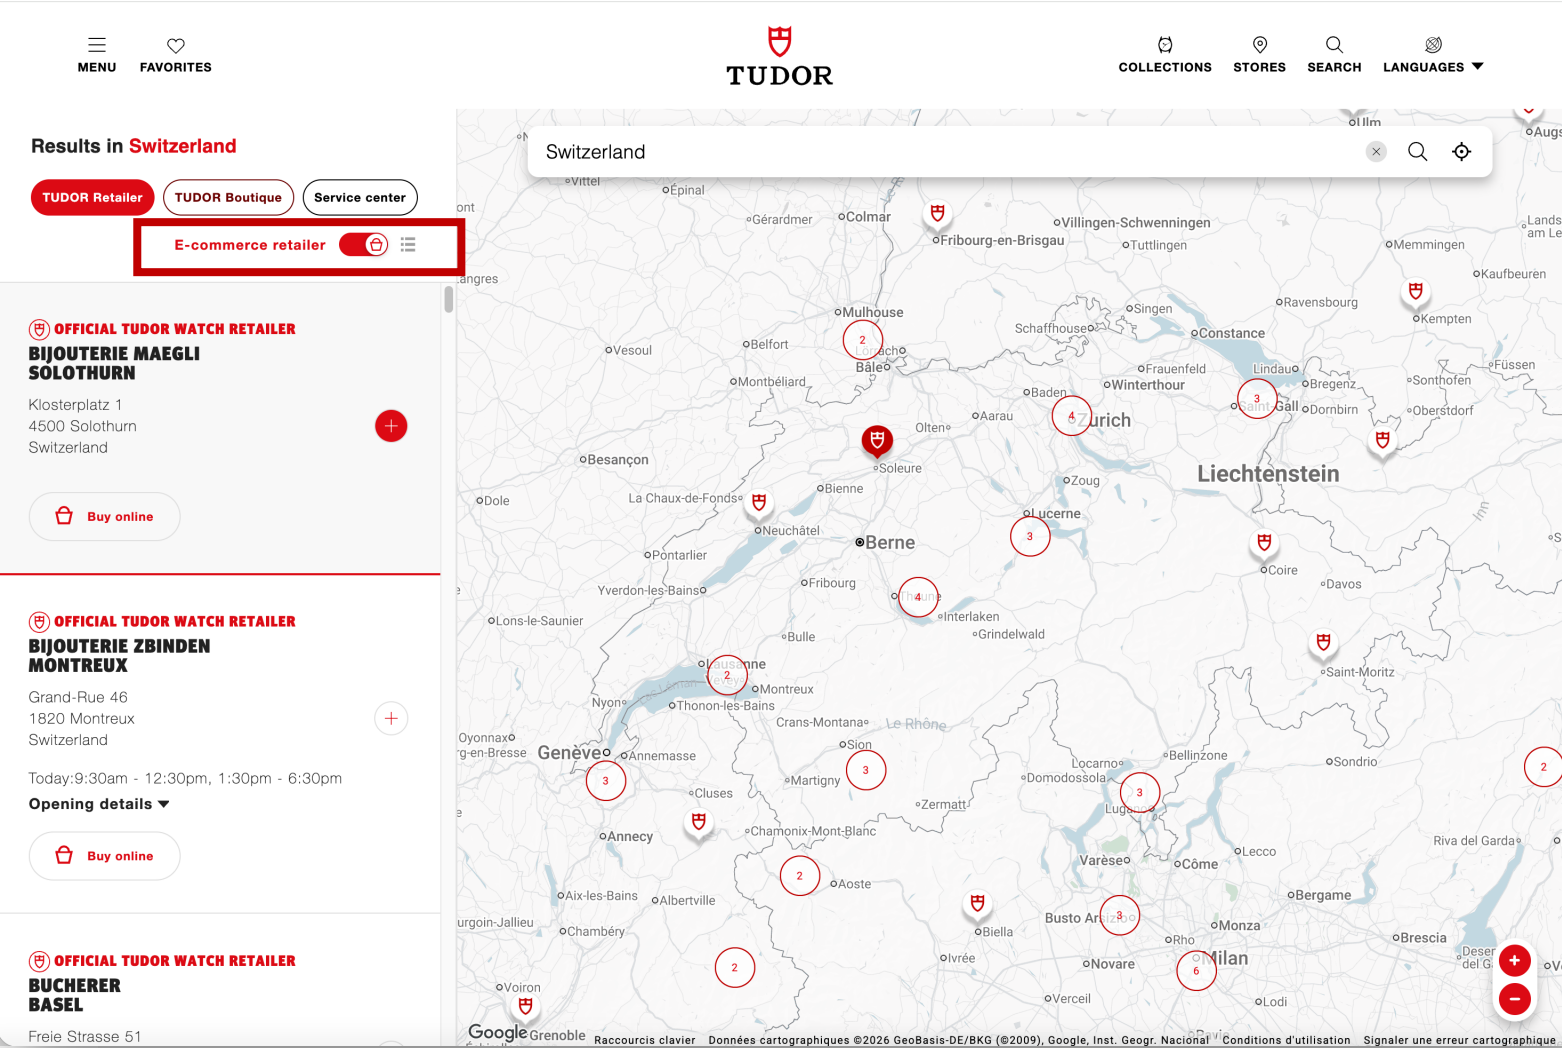

SPAIN

SINCE JULY 2025

Greater Visibility for eCommerce Retailers

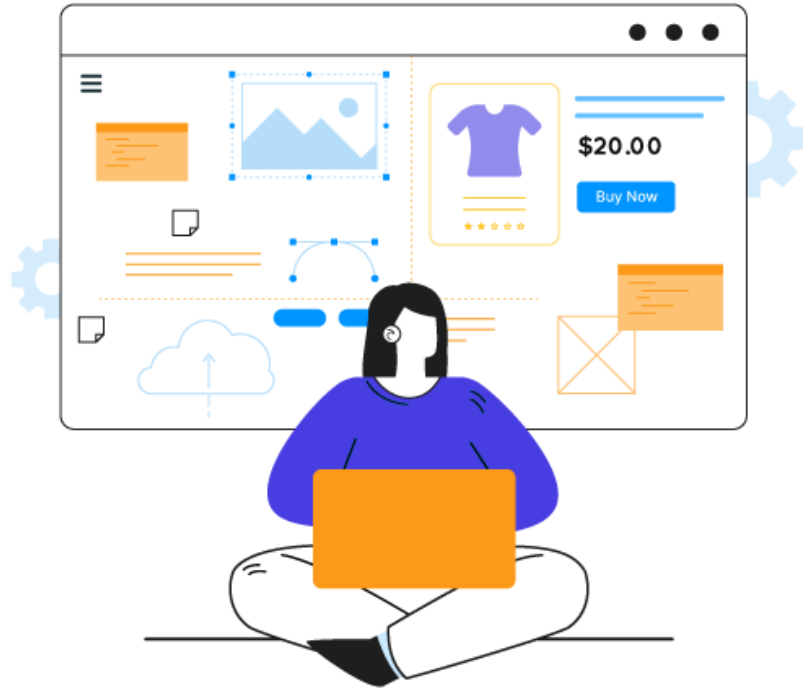

Featuring all eCommerce retailers on the TUDOR Store Locator

<https://www.tudorwatch.com/retailers>

E-commerce retailer

DISCLAIMER

**TUDOR WILL NOT
SELL DIRECTLY ONLINE**

OUR E-COMMERCE PROGRAM

FOR RETAILERS

This new program gives e-commerce retailers greater visibility.

BOOSTED VISIBILITY

Display of the retailer's e-commerce inventory directly on the Tudor website

SEAMLESS CUSTOMER EXPERIENCE

Guide and streamline the customer journey to purchase on the retailer's eCommerce product page.

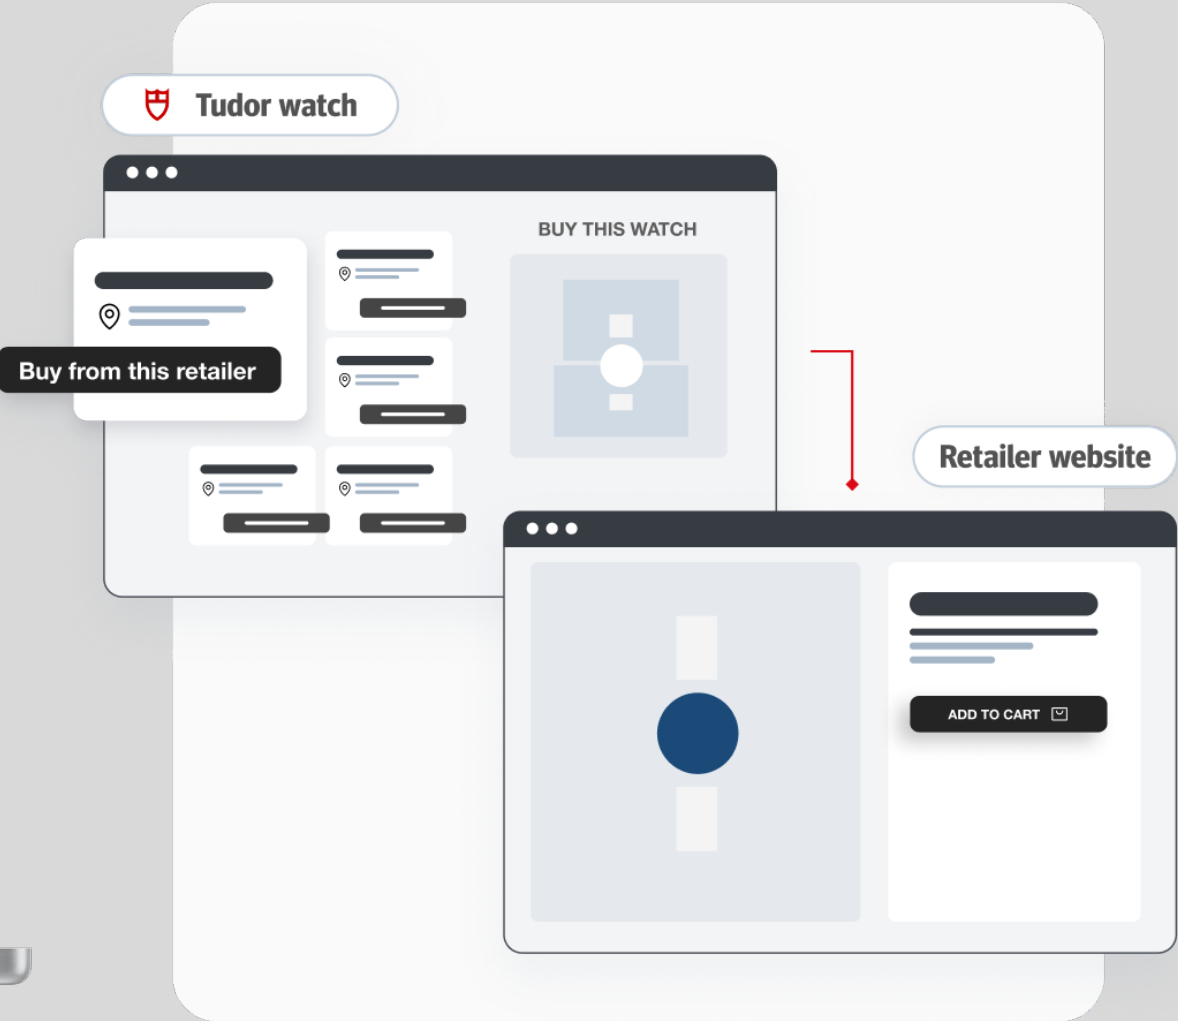

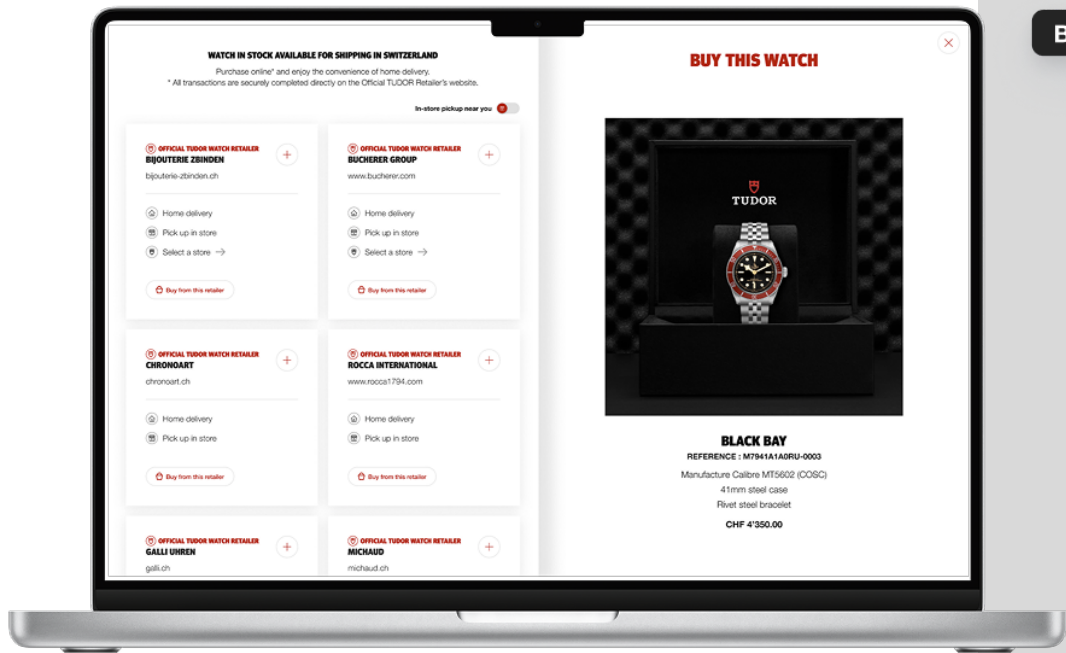

+ ONLINE SALES

Helping attract new customers and drive sales

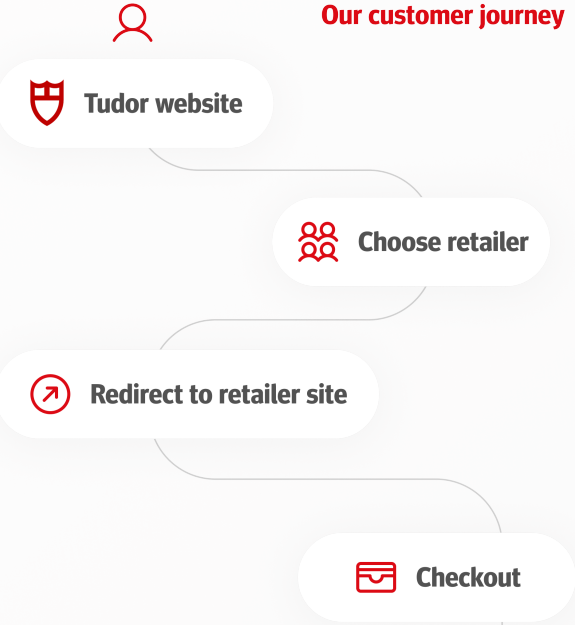

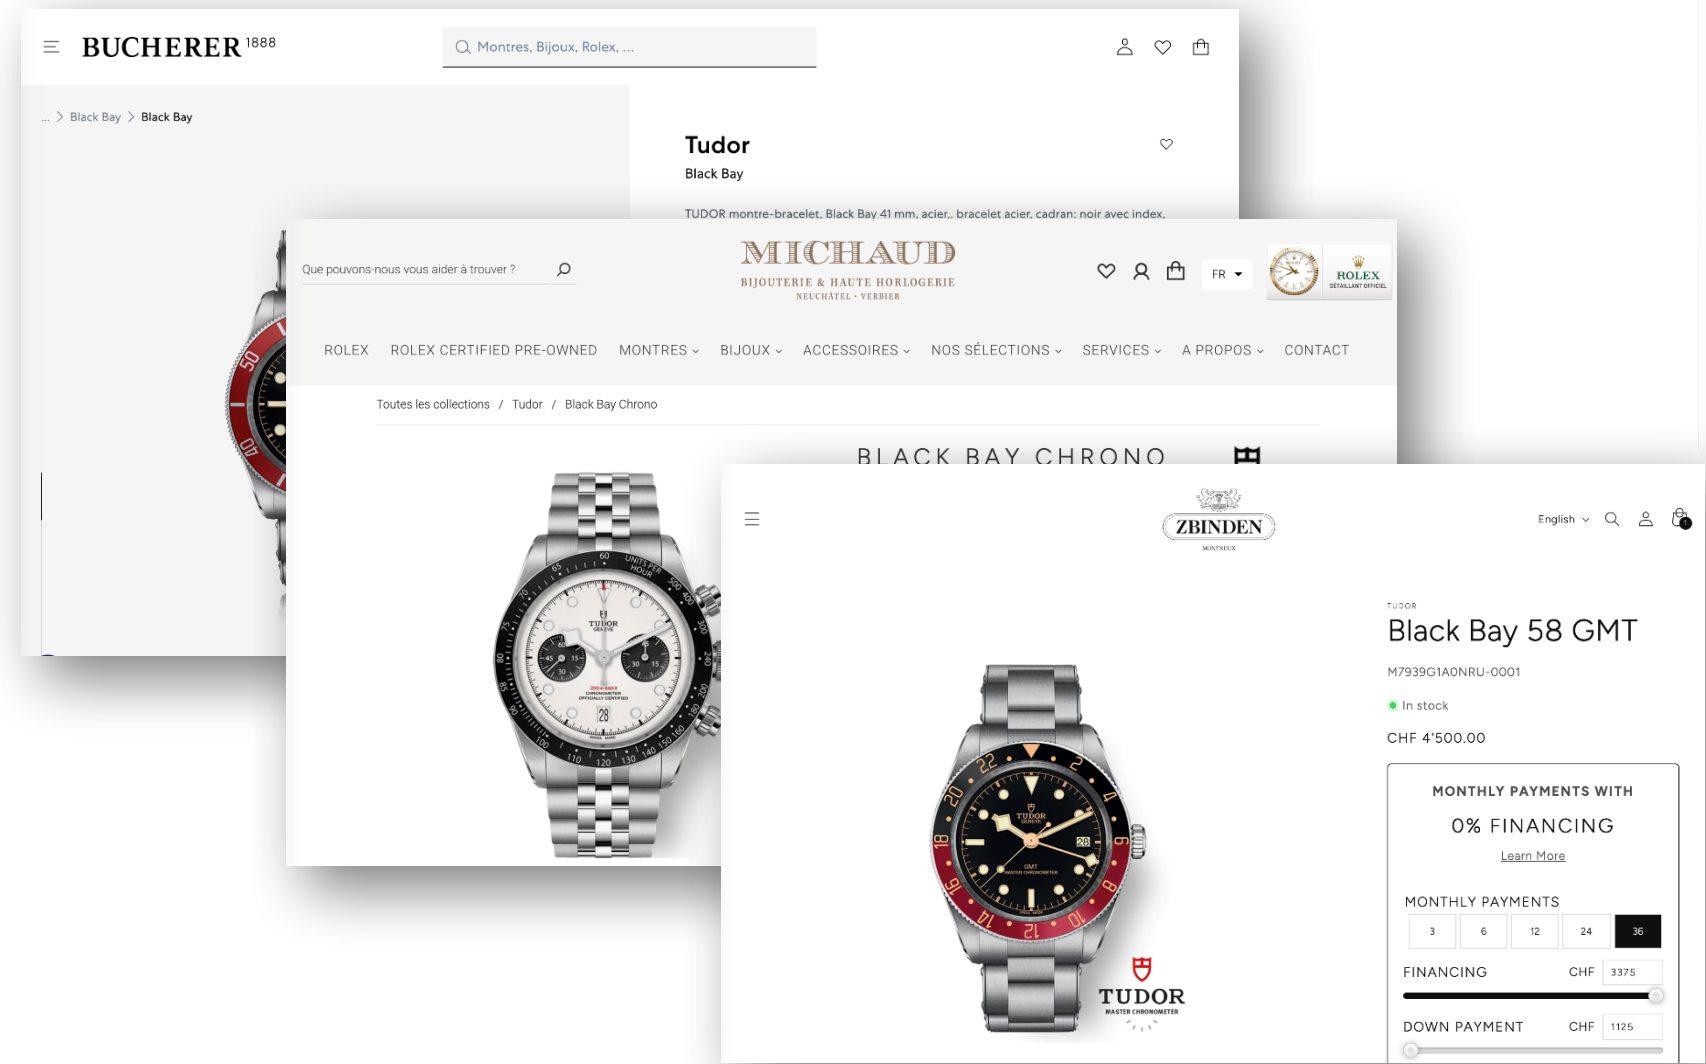

OUR VISION

If a retailer offers a product for online purchase on its e-commerce website, we direct the user to the product page on that website in the relevant country.

-  **More visibility**
-  **More sales**

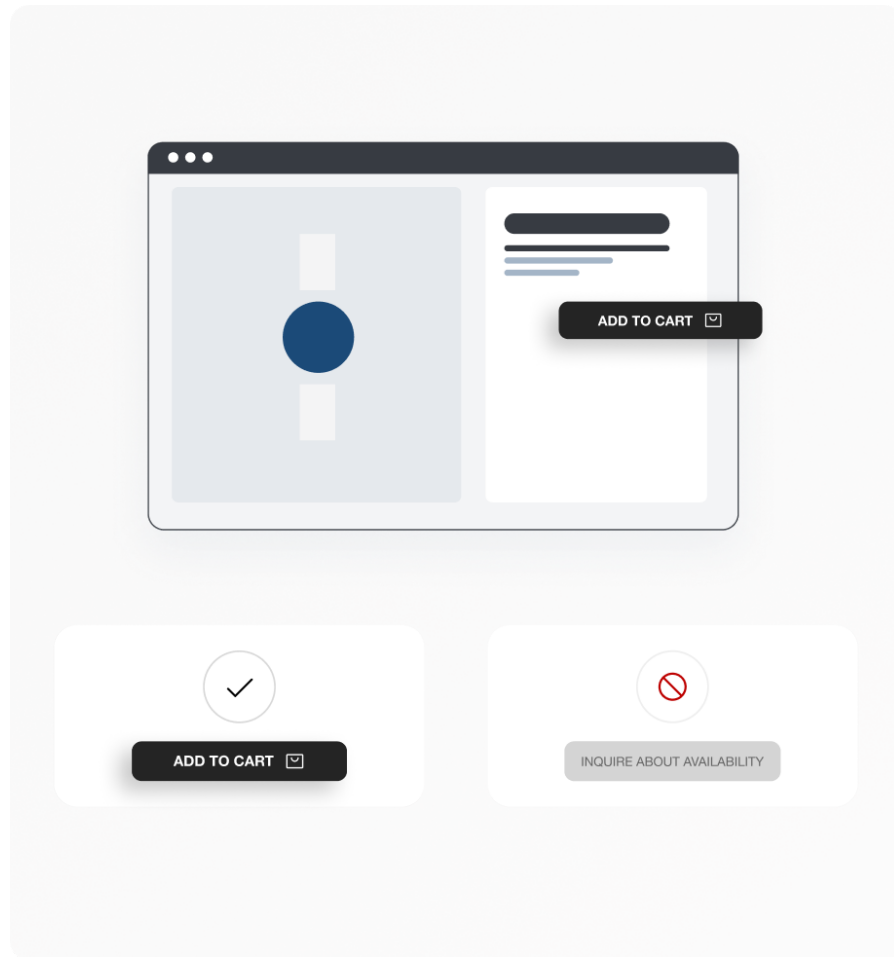

A MARKETPLACE / HYBRID VISION

Live Demo
Swiss Market

ONLY PRODUCTS AVAILABLE ONLINE

Only products available for immediate online purchase on the retailer's website will be featured on TUDOR website.

Product quantities are not shown.

If an item is out of stock, the retailer's eCommerce link is automatically hidden.

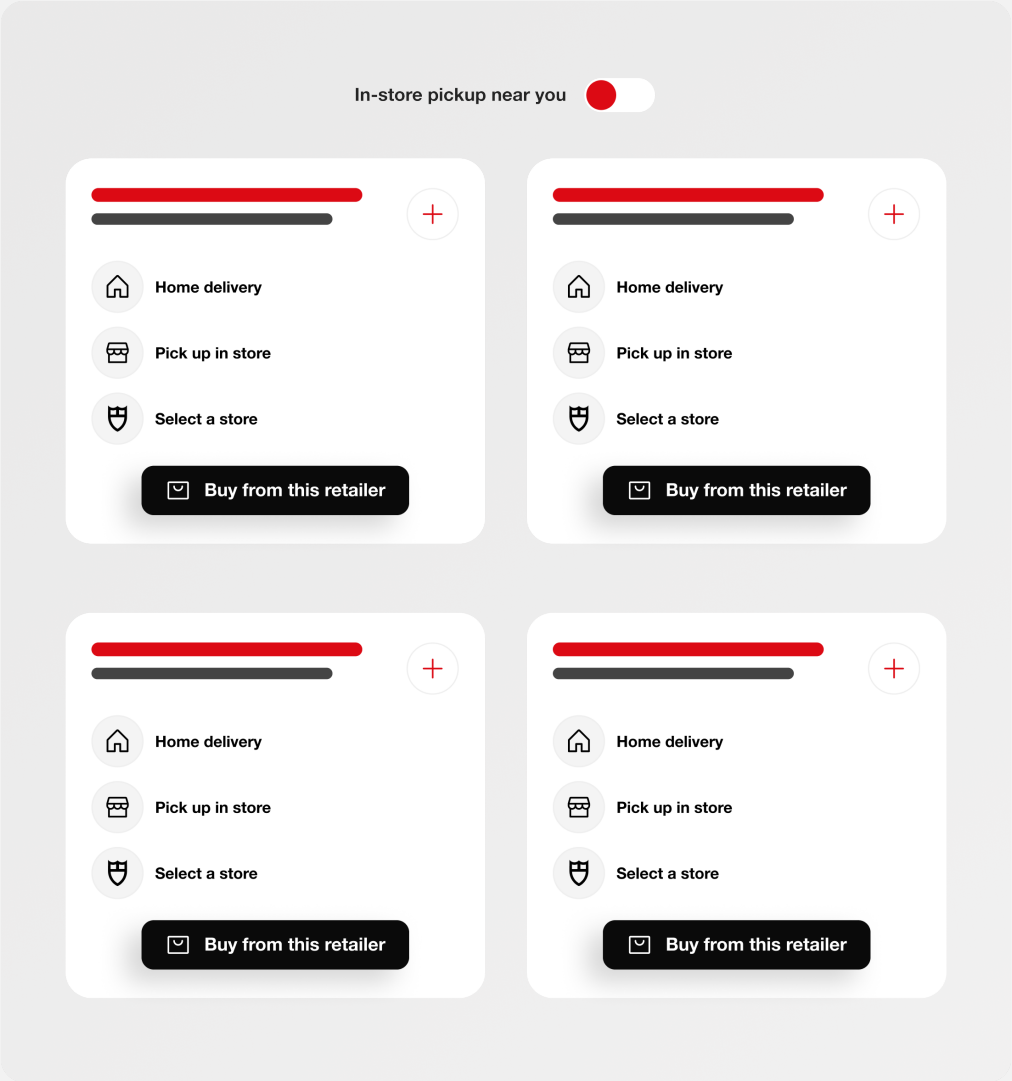

IN-STORE PICKUP

Optimized Pickup Availability by Store

In-store pickup times and availability can be specified by store to enhance the customer journey.

 Home delivery in **under 48h**

 Available for in-store pickup **within 24h**

TUDOR HQ

RETAILERS

E-STOCK AGGREGATION

TUDOR aggregates the e-COM inventory of official retailers

- Real-Time synchronization
- Display on Tudorwatch.com

RETAILER SELECTION

TUDOR connects customers to one or several retailers

- Dynamic display
- Home delivery + pick up in store (optional)
- Deployment by country

TRANSACTION PROCESSING

The retailer manages transactions through their own systems

- Payments & Invoicing
- Accuracy of stock and synchronization via API

ORDER FULFILLMENT

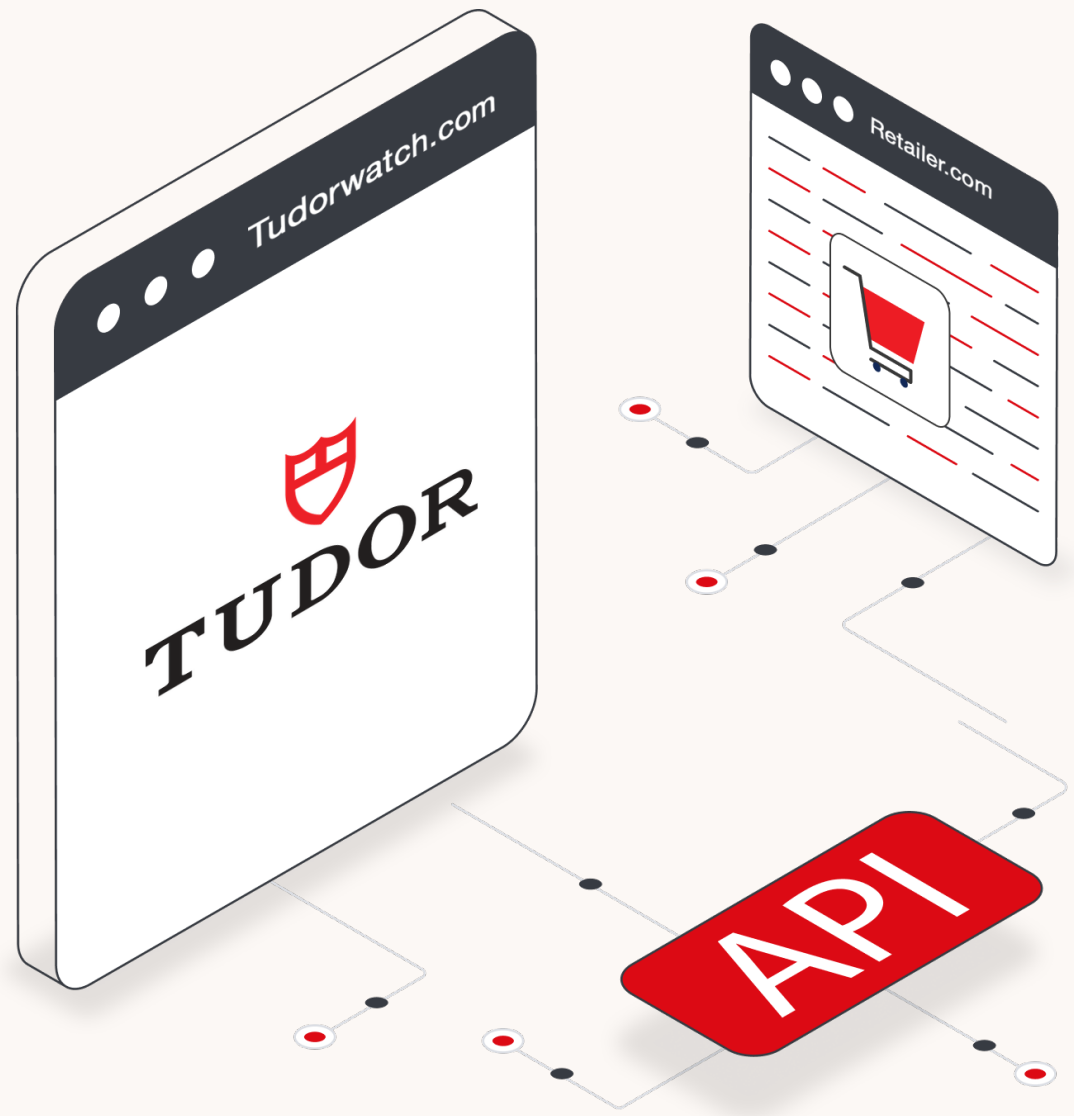

The retailer is responsible for order fulfillment and after-sales service

- Shipping and delivery
- Returns and claims management

HOW ?

HOW ?

A dedicated API (connector) is available in order for the retailers to send us their e-Stock data.

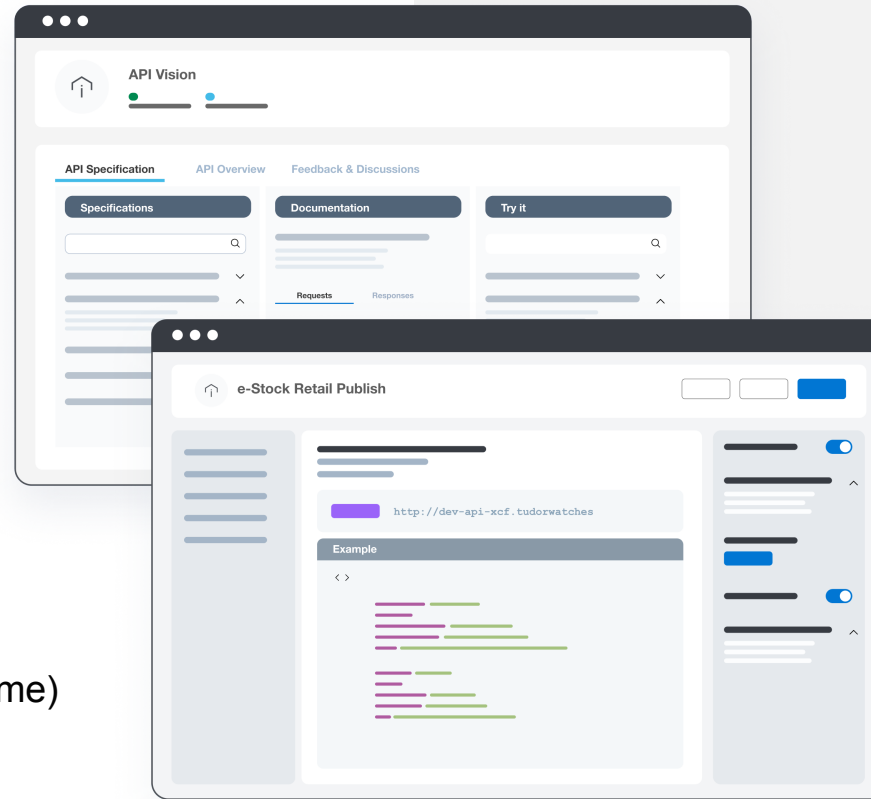

API = Application Programming Interface

An easy API to use

- Country (ISO code)
- Quantity (absolute value)
- URLs to your website watch page (localized)
- Availability for pick-up in store (under how many time)
- In batch for a complete sync
- Per reference for incremental updates

HOW IT WORKS

A simple and automated connection

By connecting your e-stock inventory to tudorwatch.com through a secure API, your e-commerce system automatically sends the availability of each model. When a model is available for online purchase, tudorwatch.com keeps product availability accurate and up-to-date, displaying the "Buy Now" button with a direct link to your product page. This ensures your offerings are visible to millions of TUDOR enthusiasts worldwide.

Data Synchronization

- Secure connection between your inventory and tudorwatch.com.
- Real-time visibility of available products.
- "On request" items excluded from display.

Display Rules

- "Buy Now" button shown only for models you offer online.
- Visibility based on the customer market.
- No stock quantities displayed.
- Models hidden automatically when unavailable.

Real-Time Purchase Updates

- Availability updated when your inventory changes.
- Next synchronisation sends the new availability.
- Unavailable models removed from "Buy Now" display.
- Prevents customers from selecting products that cannot be purchased.

Technical Environments

- Staging environment used for testing and integration.
- Production environment connected to tudorwatch.com.
- Access keys provided by TUDOR.
- Keys must be stored securely and used only by authorised systems.
- Full request formats and address details available in the technical documentation.

The e-Stock API should retrieve only products available for immediate online ordering on the retailer's website.

Do not include products that are available only upon request.

A seamless path from discovery to purchase

Imagine a customer visiting tudorwatch.com and instantly discovering which watches are available in their country, thanks to real-time stock visibility from our network of Official Retailer partners.

When they find a model they love, a "Buy Now" button appears, guiding them to choose between home delivery for convenience or in-store pickup for a boutique experience.

After selecting a retailer, shoppers are seamlessly redirected to your product page for a secure and effortless checkout. Offering in-store pickup adds a personal touch and extends the luxury experience online.

Every step is designed to be intuitive, dynamic, and inspiring

Our customer journey

- Tudor website
- Choose retailer
- Redirect to retailer site
- Checkout

TRACKING ONLINE SALES

- The documentation requires the implementation of online tracking codes to monitor all conversions generated by high-quality traffic from Tudorwatch.com.
- Retailers are required to complete the online sales tracking Excel template after go-live and submit it to their TUDOR Local contact on a monthly basis.

Tracking Online Sales

To enable end-to-end tracking, please append campaign tracking parameters to the product landing page URLs provided via our API. These may include UTM tags for Google Analytics or equivalent parameters used by your analytics platform.

`https://www.e-com-retailer.com/ch-en/watches/tudor/black-bay/code.html?`

`utm_source=tudorwatch.com&utm_medium=website&utm_campaign=tudor_stock_program`

This setup can be adapted to align with your standard media campaign tracking methodology.

We kindly request that you enable online tracking so that you can provide sales reports upon request.

Please [click here to download the ideal Excel](#) template for the online tracking report linked to this program.
