

E-COM PROGRAM USING THE API

Technical Kick-off Presentation

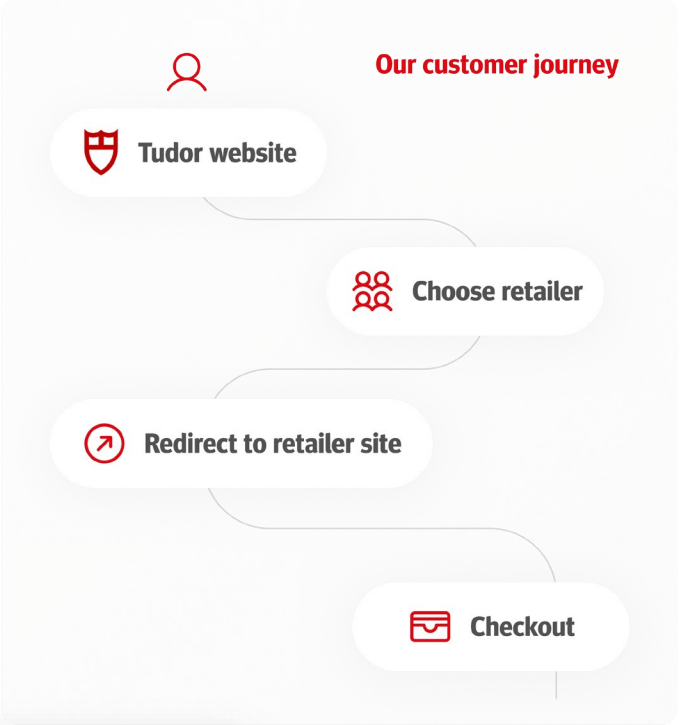

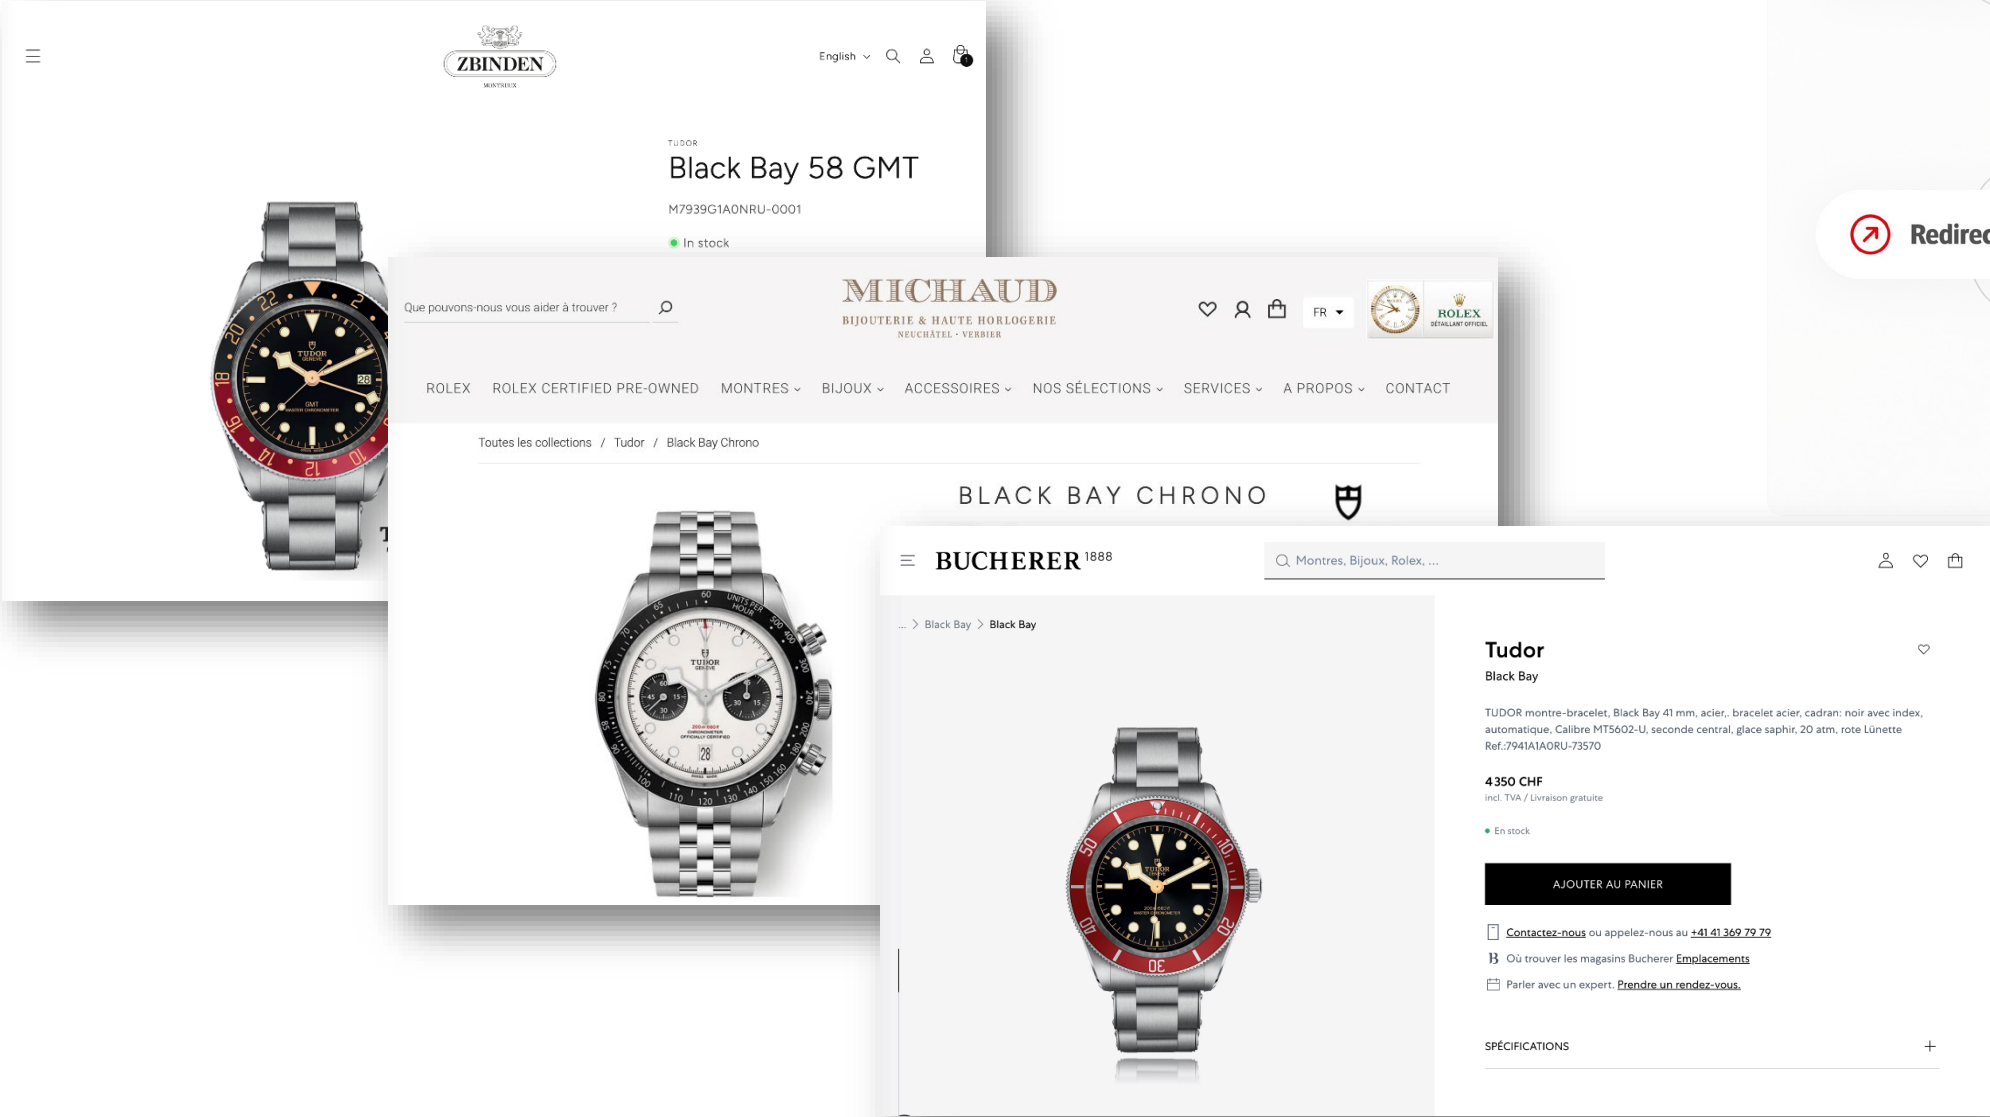

OUR VISION

From discovery to purchase in one seamless click

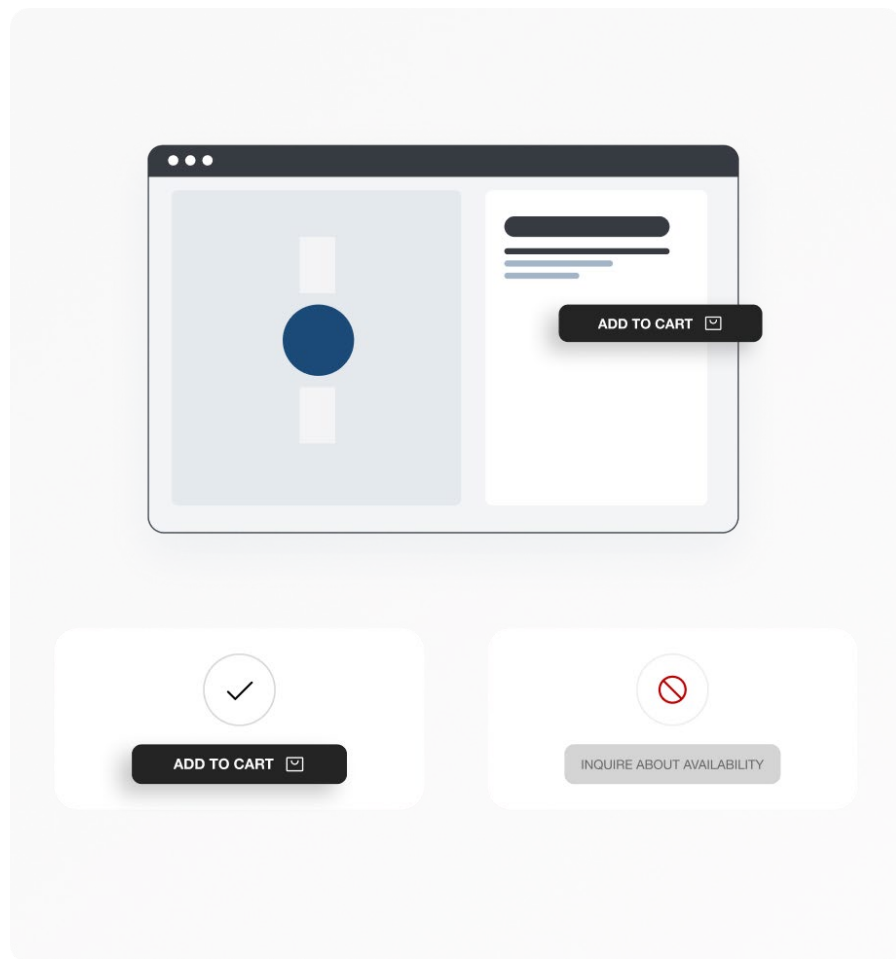

showcasing real-time retailer e-commerce inventory on tudorwatch.com to guide customers straight to the retailer's product page, attracting new buyers and accelerating sales.

A MARKETPLACE / HYBRID VISION

ONLY PRODUCTS AVAILABLE ONLINE

Only products available for immediate online purchase on the retailer's website will be featured on TUDOR website.

Product quantities are not shown.

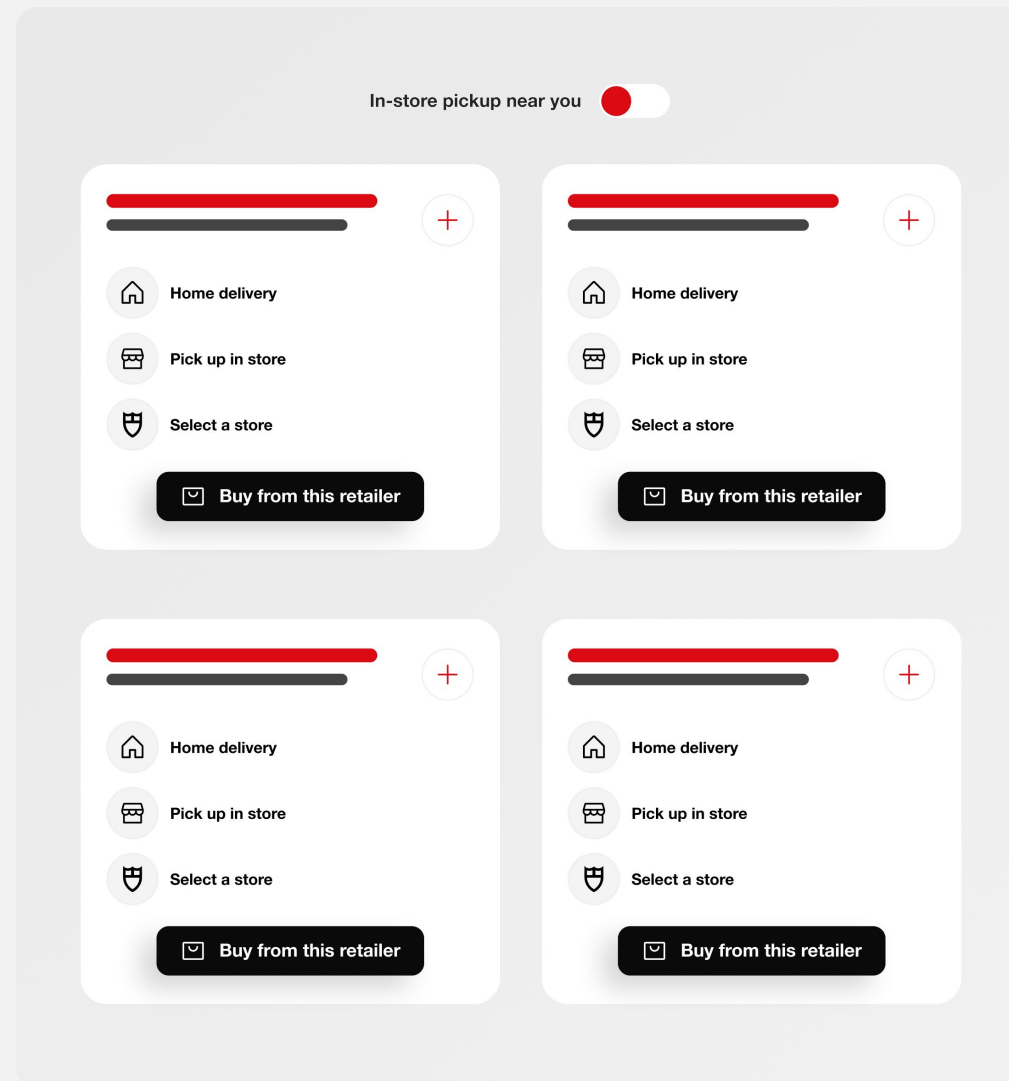

If an item is out of stock, the retailer's eCommerce link is automatically hidden.

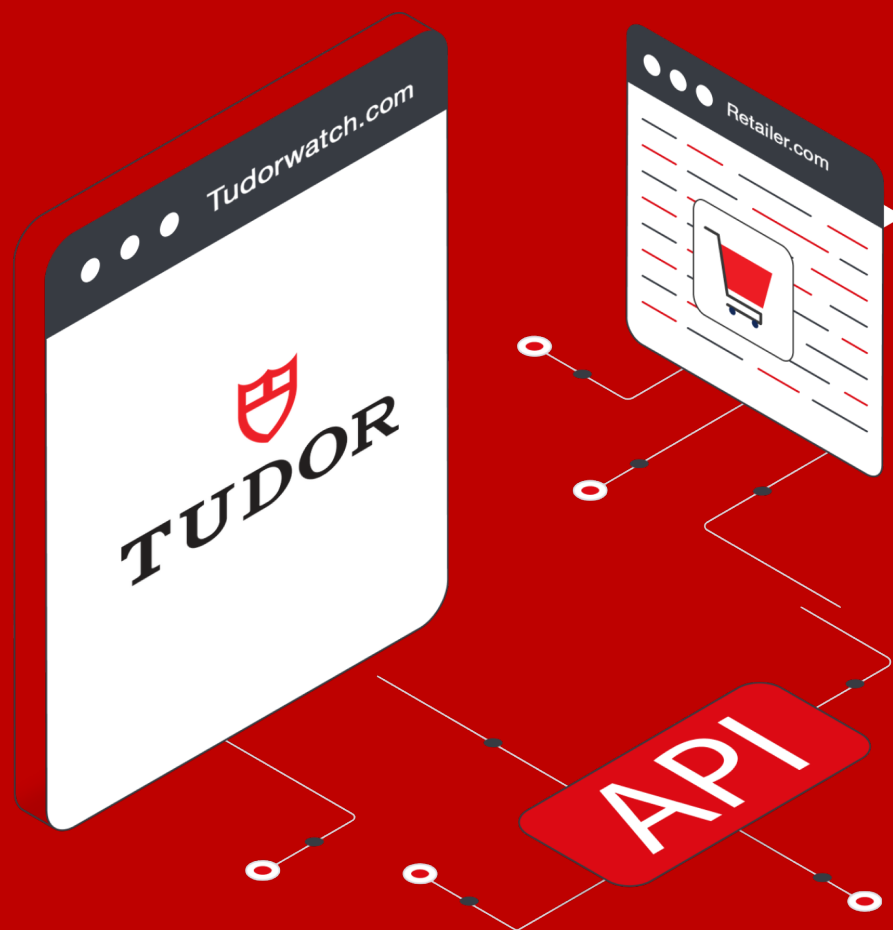

IN-STORE PICKUP

Optimized Pickup Availability by Store

In-store pickup times and availability can be specified by store to enhance the customer journey.

 Home delivery in **under 48h**  Available for in-store pickup **within 24h**

USING THE API

API SPOTLIGHT

THE PORTAL CONTAINS ALL THE INFORMATION NEEDED TO EASILY INTEGRATE THE E-STOCK API

Dedicated processes allow you to:

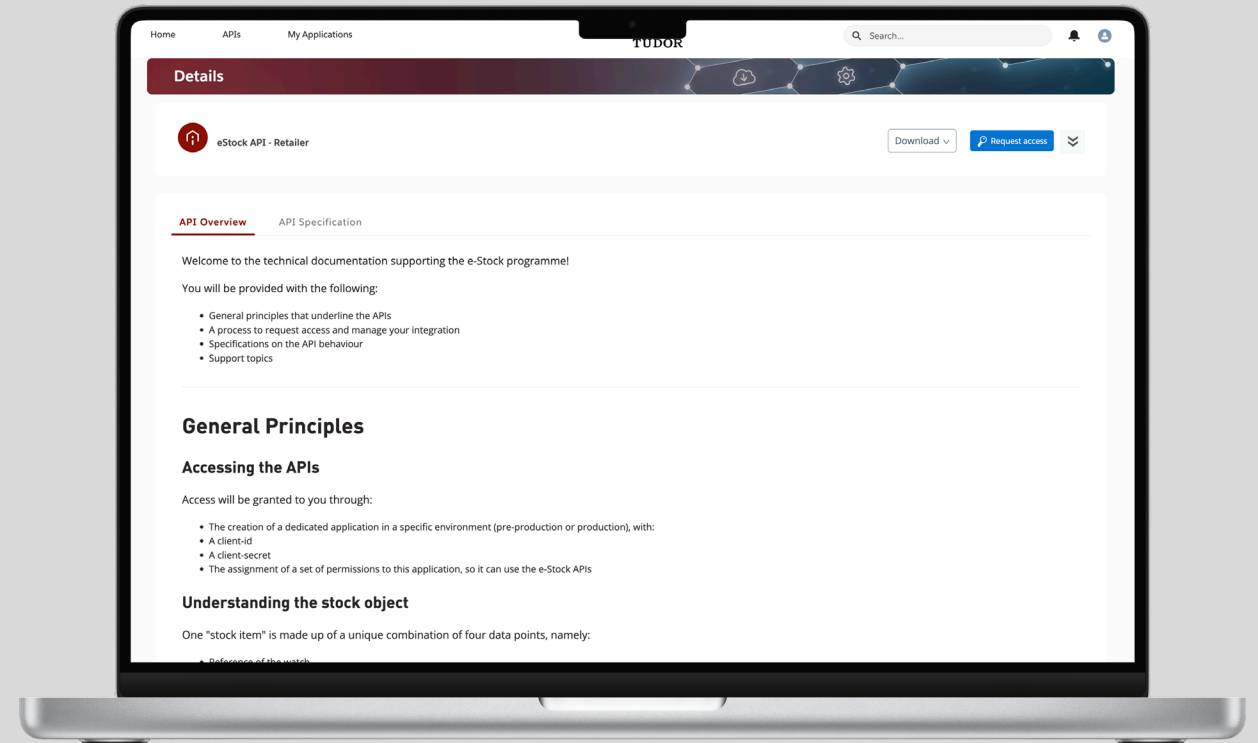

- Create a dedicated application (client-id and client-secret) with the appropriate permissions
- Manage your application's lifecycle (accesses, secrets)
- Submit support requests

A **comprehensive API** overview will provide:

- API description
- REST API specifications
- Concrete examples of requests and responses
- Testing services (mock)

Two **environments** ensure easy and secure integration:

- Pre-Production (PP)
- Production (PROD)

STOCK ITEM

THE STOCK ITEM CONTAINS ALL THE IMPORTANT ATTRIBUTES

- Watch reference (TMC)
- Country (ISO alpha-2 code)
- Quantity (absolute value, ≥ 0)
- Default URL of the product page on your website
- (optional) Localized URLs (strongly recommended)
- Availability for online purchase
- Overall availability for in-store pickup
- (optional) Typical home delivery time (in hours, ≥ 0)
- (optional) Store-specific details on pickup availability and lead time
(via the RSWI, identifier of the boutique)

RSWI is our unique identifier for a Point of Sale (POS) linked to our system.
The POS list you retrieve will correspond to the entries visible on the store locator

ENDPOINTS

THE 5 API ENDPOINTS DE L'API GIVE YOU THE FLEXIBILITY YOU NEED TO SHARE YOUR STOCKS

POST /stocks to send incremental updates by reference

- create or update a stock item
- automatically versioned

POST /stocks/batch to send a full synchronization

- create or update a list of stock items
- missing items (previously sent) will be set to 0 automatically versioned

GET /stocks to retrieve your previously sent items

- paginated list of all your stock items
- includes the date/time and version

GET /point-of-sales to retrieve the list of your stores

- complete list of your stores
- includes identifiers and addresses

GET /health to check the status of the service

- operational/unavailable status

Item validation, along with comprehensive error and response handling, enables you to debug autonomously.

POST `api.services.mytudorwatch.com/estock-retail/retailer/v1/stocks`

POST `api.services.mytudorwatch.com/estock-retail/retailer /v1/stocks/batch`

GET `api.services.mytudorwatch.com/estock-retail/retailer/v1/stocks`

GET `api.services.mytudorwatch.com/estock-retail/retailer/v1/point-of-sales`

GET `api.services.mytudorwatch.com/estock-retail/retailer/health`

ACCESSING THE API (OVERVIEW)

GETTING STARTED

VALIDATE YOUR INTEGRATION IN JUST A FEW DAYS

1

Explore the documentation

- Get familiar with the programme overview on the [TOCC](#)
- Get familiar with the technical documentation on [API Spotlight](#)

2

Create your applications

Retailers only 

- As a retailer, create one PREPROD and one PROD application.
- Share each application client-id/secret with your agencies if relevant.

3

Subscribe to the e-Stock API

- Request access for each app. on the matching API instance (PREPROD / PROD)
- Try the mock service

4

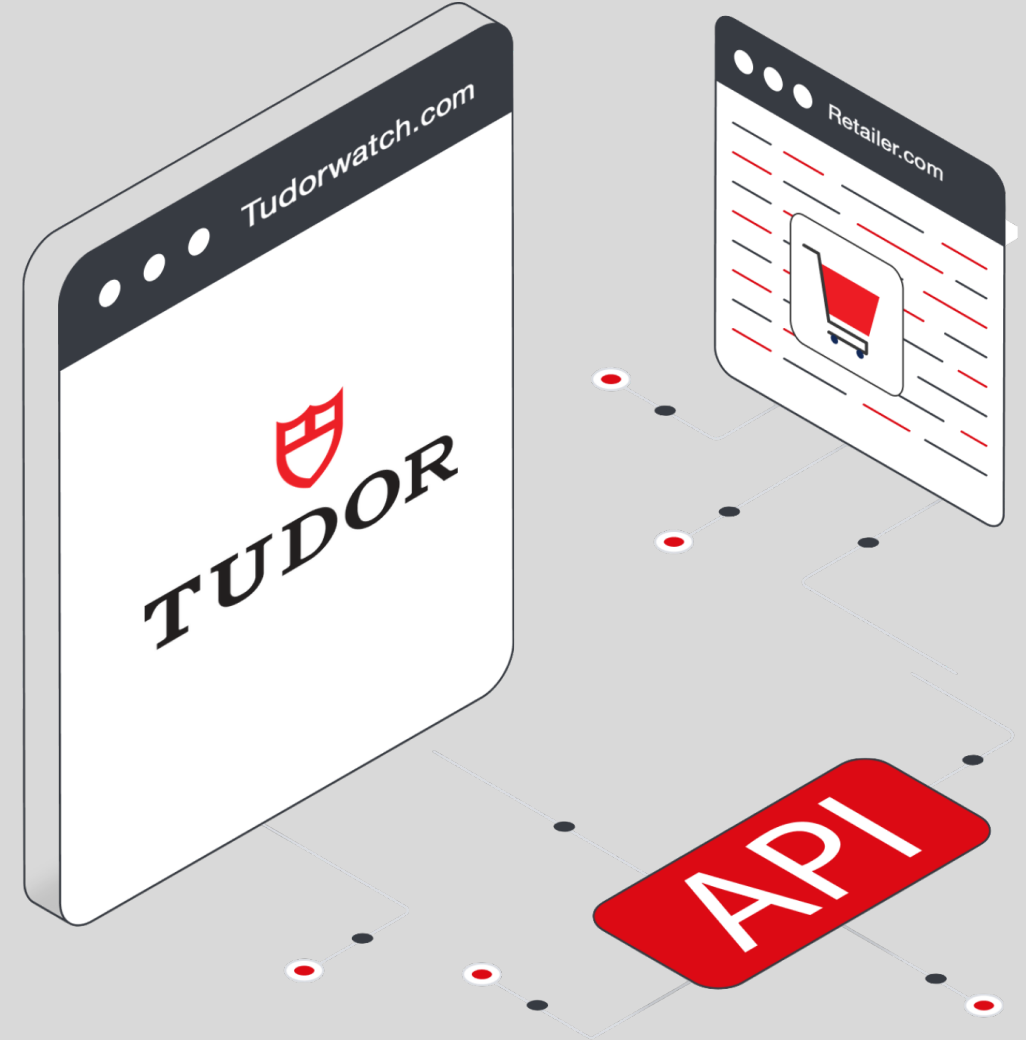

Test in Pre-Production

- Connect your inventory system with the PREPROD application
- Test every endpoint

5

Go live in Production

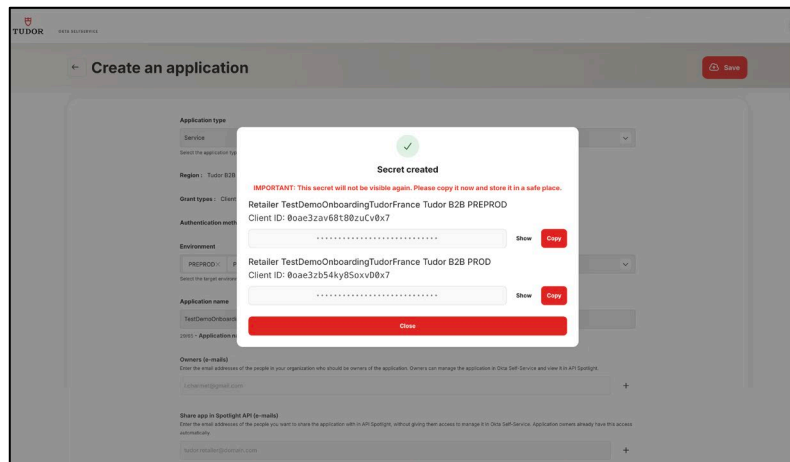

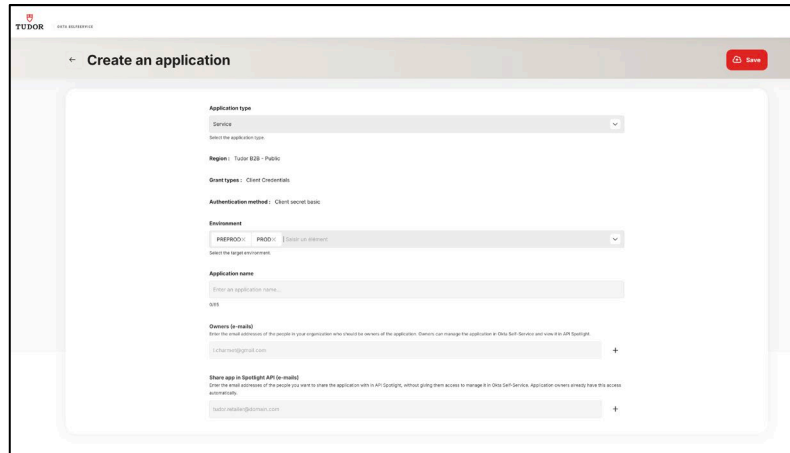

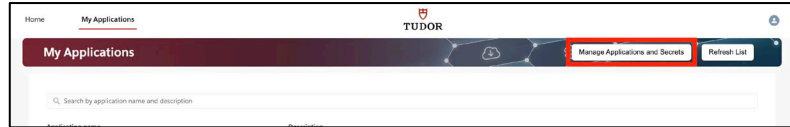

- Connect your live system with the PROD application
- Monitor the flows

ACCESSING THE API (DETAILS)

TWO STEPS TO GET STARTED

1/2 - CREATE YOUR APPLICATIONS

1. In [API Spotlight](#), click on « My applications » then « Manage applications and Secrets » to get redirected on the external portal (OSS)

2. On this portal, click “+ Application,” then fill out the form
- check that most fields are pre-filled
 - use an explicit name that states your retailer name (e.g. *[Retailer Name] Estock Tudor*)
 - keep PREPROD and PROD to have two applications
 - add co-owners who can manage the application (retailer members)
 - optionally add participants (for example, your digital agencies) who will only have visibility into the application.

3. When submitting the form, **be sure to copy the application secrets**, as they will no longer be accessible afterward.

--

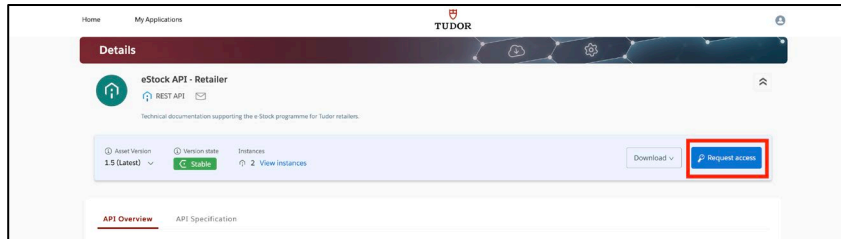

In API Spotlight, after a few minutes, you will find your newly created applications in the “My applications” tab.

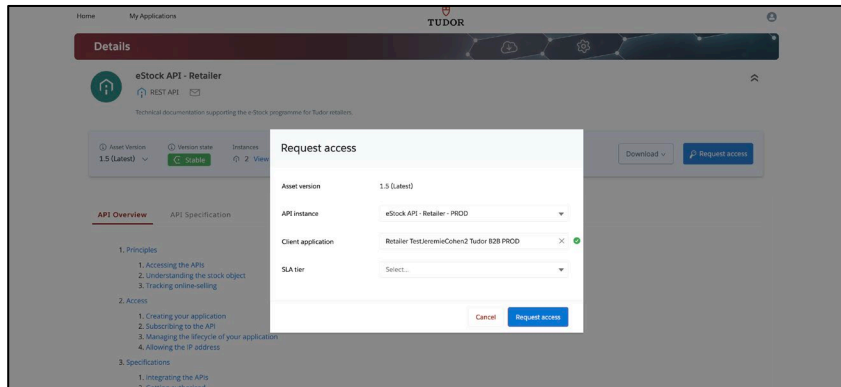

IMPORTANT: Only retailer accounts can request identifiers for pre-production and production environments. If you are a digital agency managing an e-commerce website, please ask your retailer customer to provide you with this information.

TWO STEPS TO GET STARTED

2/2 – SUBSCRIBE TO THE APIS WITH YOUR APPLICATIONS

4. In [API Spotlight](#), from the home page, access the eStock Retailer API and click “Request access”

5. Fill in the form

- select the correct instance of the desired API (PREPROD or PROD)
- select the correct application to associate (PREPROD or PROD)
- select the defect SLA (only option)

Note: subscription approval is performed manually by our teams as soon as possible.

6. As soon as you receive the subscription confirmation email, you can test the API.

Q&A ?

TOCC E-COM PROGRAMME

All e-commerce information is available on the Tudor Official Communication Center (TOCC):

- Documentation
- Form-based support
- API access (one production environment and one staging environment)
- ...
